Dedicated to eCOA and patient engagement

Kayentis Partners with OmniComm to Offer Integrated EDC and eCOA Solutions

kayentis · Thursday, June 7th, 2018

Fort Lauderdale, FL – OmniComm Systems, Inc. (OTCQX: OMCM), a leading global provider of clinical data management technology, today announced a partnership with Kayentis, a global provider of electronic Clinical Outcome Assessment (eCOA) solutions for patient data collection in clinical trials. Under the terms of the partnership, the two companies will work together to provide life science clients with OmniComm’s TrialMaster® electronic data capture (EDC) suite integrated with Clin’form®, eCOA solution Suite from Kayentis — thereby offering an enhanced integration of the two platforms.

Prior to the partnership, a number of clients had independently selected both OmniComm and Kayentis for best-in-class data capture solutions. Therefore, the strategic relationship represents a logical fit and brings an exciting opportunity to streamline EDC and eCOA data capture, according to executives from both companies.

“After successfully implementing projects alongside OmniComm, we are thrilled to grow our partnership and bring it to this new step. Both companies share strong values and strive to provide customers, clinical sites and patients with the most efficient, easy-to-use and comprehensive solutions,” said Guillaume Juge, CEO at Kayentis.

Smart phones, tablets and other devices serve an expanding role in clinical trials as doctors, nurses and other researchers increasingly use mobile devices to collect trial data. Likewise, patients using mobile devices and wearable technology have heightened the need for electronic patient-reported outcome (ePRO) solutions.

Through joint marketing and business development initiatives, the two companies will work together to deliver OmniComm’s EDC technology and services integrated with eCOA solutions from Kayentis.

“OmniComm is delighted to be forging a formal relationship with Kayentis that will benefit our clients who need eCOA technology,” said Stephen Johnson, president & CEO of OmniComm Systems. “More and more, we see the voice of the patient/subject becoming critical to the success of studies, and we feel that Kayentis’ technology and support will bring enormous value.”
