## Waste Management Report 2018

kayentis · Tuesday, March 12th, 2019

### **Kayentis is committed to responsible waste management**

After the promotion of environmentally friendly transport - [2018 Sustainable Mobility Report](#) - (e.g. public transport, car-sharing, bicycles), waste management is a key factor in our Corporate Social Responsibility policy.

**As an IT service provider, the waste management needs that result from our activity are mainly the following:**

- Paper documentation and end-of-life electronic equipment provided to our clients.
- Paper documentation and end-of-life electronic equipment used by our employees.
- Domestic and day-to-day materials used by our sites, mainly at our headquarters in Meylan, France.

**The type of waste that we generate doesn't require any specific handling and so our waste management approach is based on the following two principles:**

- To reduce upstream waste.
- To recycle waste.

**To achieve our objectives, we have implemented both small and large actions including aspects for both the employees and for the company as a whole. Most importantly, we aim to work towards a coherent overall approach and a general improvement in our waste management. But we also aim to develop a collective awareness so that our employees do not forget their own environmental principles when they arrive at the office.**

So we have organized our waste management processes around two main objectives:

- **OBJECTIVE 1**  
**To improve the waste management linked to the day-to-day life in the company**
- **OBJECTIVE 2**  
**To improve the management of waste linked to company activities**

Download our Waste Management Report  
and discover our key actions
