

ADVANTAGES OF USING A SINGLE DEVICE AT HOME AND ON-SITE

Here are some benefits of combining ePRO and eDiary use as well as some advantages of the use of a Tablet or Phablet vs a Smart Phone for data collection

KEY BENEFITS FOR PATIENTS

- ✓ **Ease of use**
It is simpler and easier to use one device than two devices, since the same device is used in the same way both at home and on-site.
- ✓ **Comfort and ergonomics to fill ePRO or eDiaries**
The larger screen offered by Tablet or Phablet devices compared to Smart Phones is associated with better accuracy and compliance among most patient populations.
The larger screen improves readability and global layout and a generous screen size is particularly helpful in the completion of Visual Analog Scales or the use of images.
- ✓ **A single device in all situations**
A further advantage of using the same Tablet or Phablet device for both home use and during study visits is to harmonize and simplify the training of patients.
There is also the option to use the same device on-site if the patient forgets to bring his/her own device.
- ✓ **Better compliance, involvement and engagement.**
A comfortable, more intuitive and easy to use device is key to increasing data quality while ensuring patient compliance in the completion of the questionnaire, and also helps the patient to remain actively involved and engaged with the trial.

MAIN ADVANTAGES FOR SITES

- ✓ **Simplified training and documentation** by using a single device in the same way at home and on-site.
- ✓ **A single device with supervised and unsupervised mode**
At the end of the visit, the Tablet or Phablet can then be used by the patient in the unsupervised mode so that the eDiary can be completed between visits.
- ✓ **The review process ensures higher data quality**
The Kayentis interface for reviewing patient questionnaires includes a complete audit trail that is recorded centrally in Kayentis' Clin'Form application.
- ✓ **Simplified eCOA logistics, device reuse, and patient reallocation**
The reduction in work eases the administrative monitoring burden for logistics and data source checks.

ADDED VALUE FOR SPONSORS

- ✓ **Ease of use**
Simplified eCOA logistics, support, and training by using a single device instead of multiple devices.
- ✓ **Preparation of the devices** and back-up devices, shipment and logistics are simplified since the number of devices sent, resupplied, reused or reallocated at the site is lower.
- ✓ **Competitiveness**
Significant time- and cost-savings on logistics and trial set up and management due to a lower number of devices.
- ✓ **Better engagement, compliance and higher quality**
Happier, more engaged and efficient trial site staff because of better patient engagement and compliance, meaning improved clinical interactions with the patient.

The advantages of using a single device are numerous and provide huge benefits for combined ePRO and eDiary clinical trials, leading to better productivity and overall time savings while at the same time making life easier for the patient, and improving data quality, patient and site engagement, and trial compliance.
