

# Let's give a voice to trial patients with the Participant Feedback Questionnaire!

The Participant Feedback Questionnaire (PFQ) is one way to engage patients by asking them about their experience of participating in a clinical trial

## ✓ WITHOUT ANY IMPLEMENTATION DIFFICULTIES

- **No psychometric validation**
- Uses the **same technology** as other eCOA questionnaires
- **Implemented at the study timepoints you want**
- **PFQ data are exported at your preferred frequency** and available to any designated person of the clinical team
- **Guaranteed confidentiality:** Exported PFQ data are anonymized (i.e. they are not linked to patient numbers)

## ✓ EASY FOR PATIENTS

- **Easy to use:** The PFQ appears **within the flow** of the eCOA build
- **Seamless:** Displayed as a PRO, the PFQ will not confuse the patient
- **Flexible:** PFQ completion remains voluntary at both the questionnaire and the question level, which brings significant flexibility

## ✓ BURDENLESS FOR SITES

- PFQ answers are **not provided to site staff and so will not generate extra work for the clinical sites**

## Implement Kayentis Participant Feedback Questionnaire in your clinical trials and create an opportunity for clinical teams to get tangible feedback!

- Provides **key information** on the patient experience in a given clinical trial
- Provides relevant information from **different timepoints** throughout the study
- **Helps protocol design and operational** decision-making for future trials
